

VARDEN living walls are the next evolution of vertical growing. Walls that grow *ornamental* and *edible* plants, achieved in a variety of settings. Thriving plants outdoor, indoor, commercial and residential settings. Varden living walls provide great plant health and low maintenance. Durable Varden components are made and assembled in the USA!

Varden features 5" dia. *mesh sock* (Vardensok) filled with large volumes of blended growing media (soil), giving roots room to move and breathe. Plant health is ensured by resting the planted sock in rows of irrigated trays that water at the roots, from underneath the planted sock, where water pools for absorption by roots and into soil.

Vardensok offered in 1' and 2' lengths can be planted at installation or pre-grown in the nursery. Easily replace, move or seasonally rotate within the wall.
