

Empowering customers to bring Green-space, Habitat, Biophilia and locally grown Food to their urban environment is our mission. We manufacture and support living walls that quickly grow over with a variety of vibrant vegetation....and stay that way with minimal effort. Our Varden vertical gardens enable soil-based gardens where none have been possible. Our Varden systems are designed with their entire life cycle in mind, utilizing the maximum re-cycled content in their manufacture and in deployed conditions. All our Living Wall and Vertical Garden Systems have been conceived with the intention of establishing optimal conditions for plant health and long-term sustainability. They are easy to use by anyone, while keeping ownership costs minimal. Our walls are economical to purchase initially, and own over time!

Vertical Living Wall Systems

Engineered, economical components, efficient installation, and excellent plant health, make our VARDEN Living Walls the most competitive in the business.

Living Retaining Wall Systems

Innovative materials, efficient handling and huge plantable in-fill volumes make our Varden Living Retaining Wall systems the best performing retaining walls in the business.

Garden and Farming Systems

Innovative components make small space gardening and vertical farming attainable, while excellent plant health makes our VARDEN Vertical Gardens the most productive in the business.
